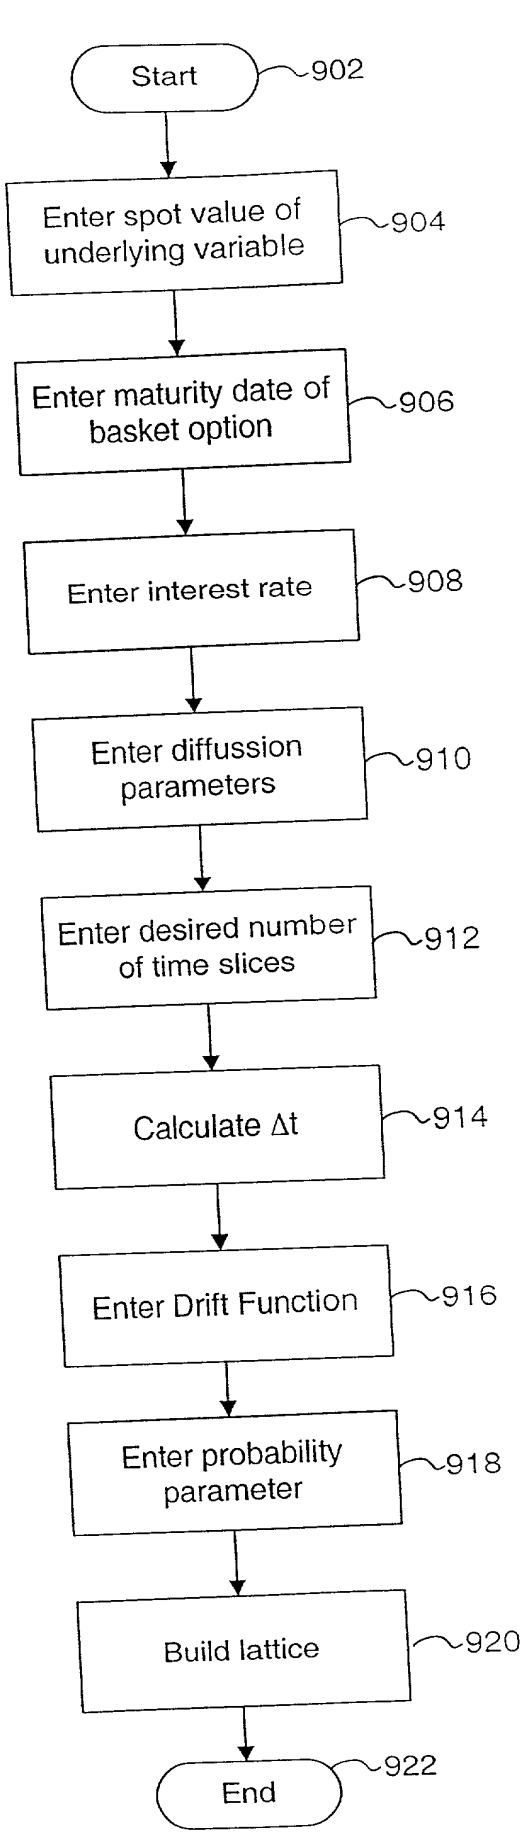
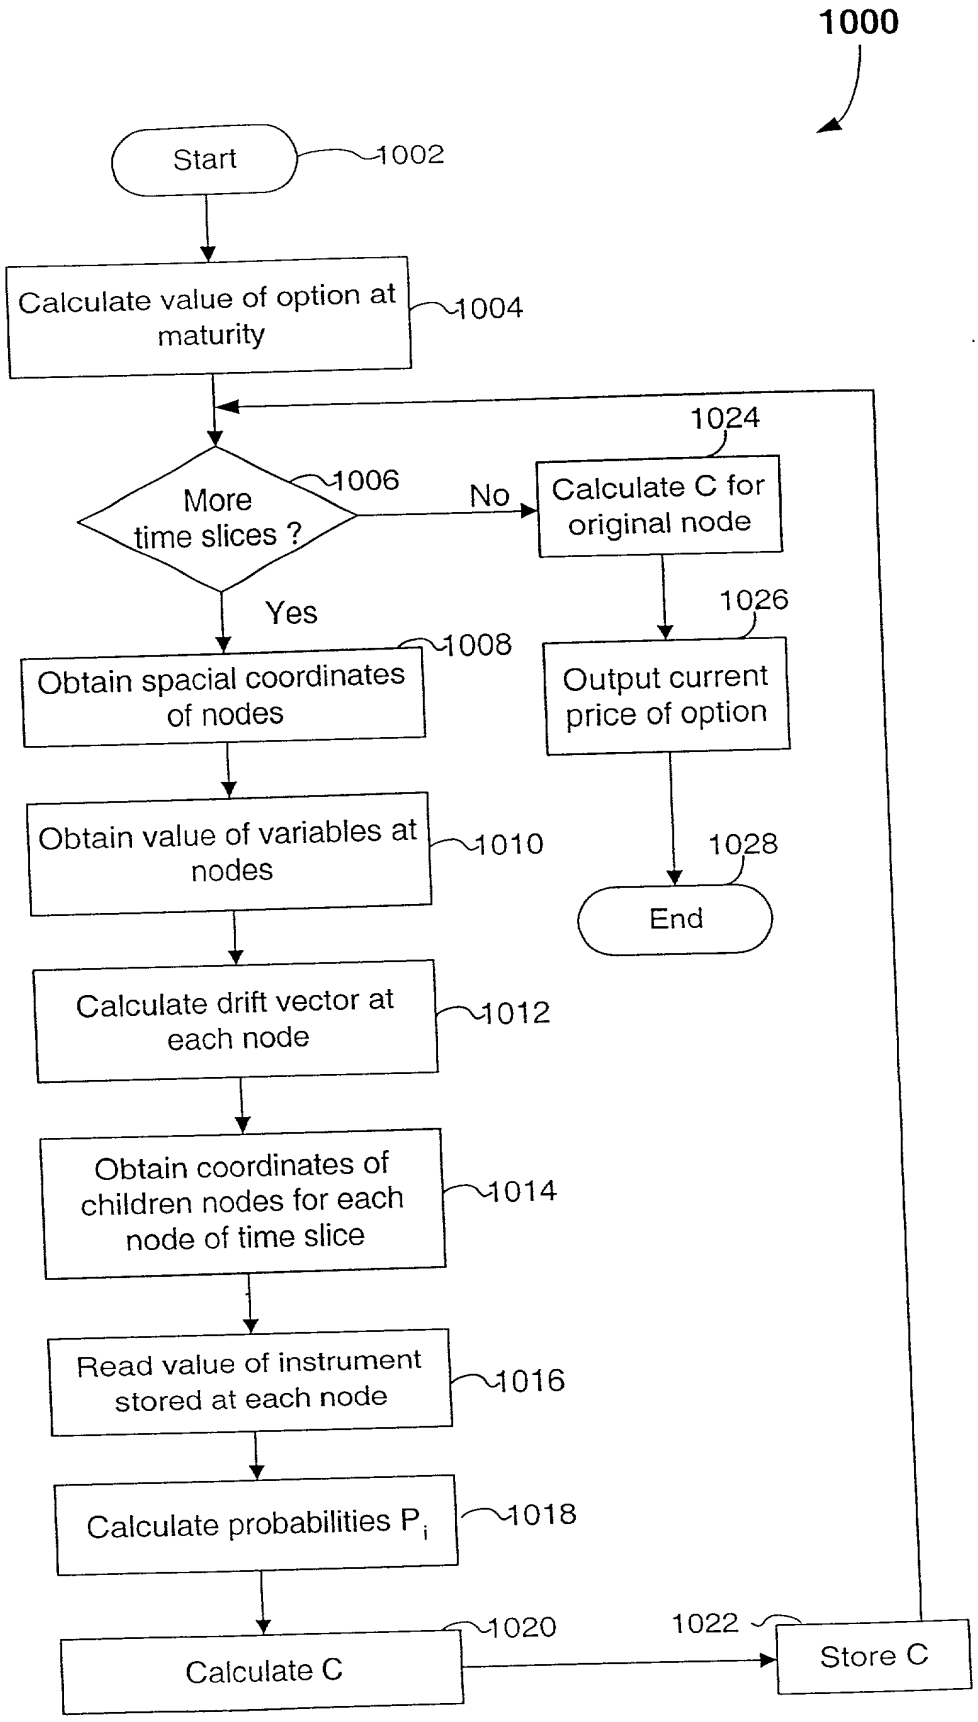
FIG. 8



900
Start
902
Enter spot value of underlying variable
904
Enter maturity date of basket option
906
Enter interest rate
908
Enter diffussion parameters
910
Enter desired number of time slices
912
Calculate Δt
914
Enter Drift Function
916
Enter probability parameter
918
Build lattice
920
End
922

FIG. 9



1000
Start
1002
Calculate value of option at maturity
1004
More time slices ?
1006
No
Yes
Calculate C for original node
1024
Output current price of option
1026
End
1028
Obtain spacial coordinates of nodes
1008
Obtain value of variables at nodes
1010
Calculate drift vector at each node
1012
Obtain coordinates of children nodes for each node of time slice
1014
Read value of instrument stored at each node
1016
Calculate probabilities P_i
1018
Calculate C
1020
Store C
1022

FIG. 10

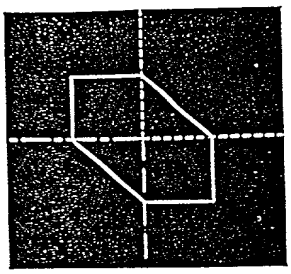


FIGURE 11

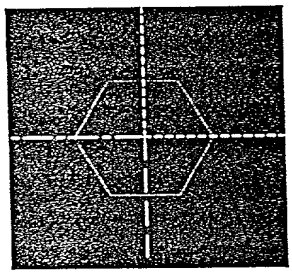

FIGURE 12

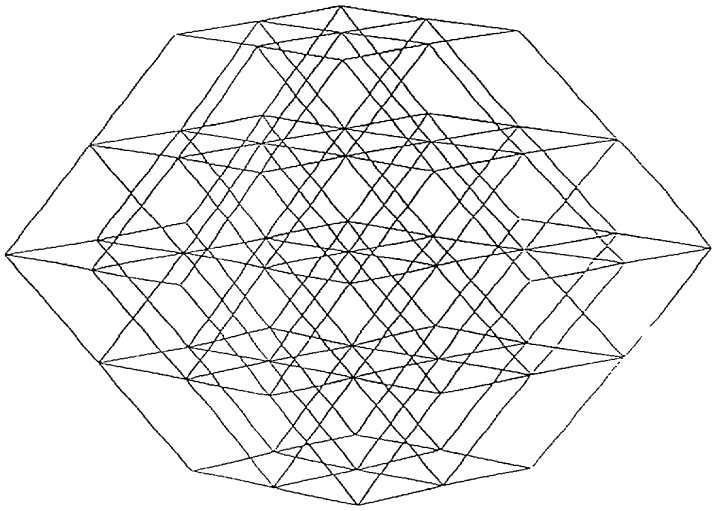

3 underlying assets, $t = 2$, 65 nodes
